

Is your network safe from hackers?

3 easy steps to improve your network security

Hackers take advantage of many weaknesses to get unauthorised access to your valuable data. They may listen in on unsecure networks to intercept your communications. What can you do?

AVOID - using free, public wifi networks. You don't know who set them up and what their motivation is.

FREE
WiFi

CHANGE - your home router password to a strong, secure password.

THINK - not all websites are secure. Never enter personal or financial details if the web address starts with **http**.

Network security explores **Digital Systems**, one of the ten key concepts of the Australian Curriculum: Digital Technologies. For more information go to <https://aca.edu.au/curriculum/>
